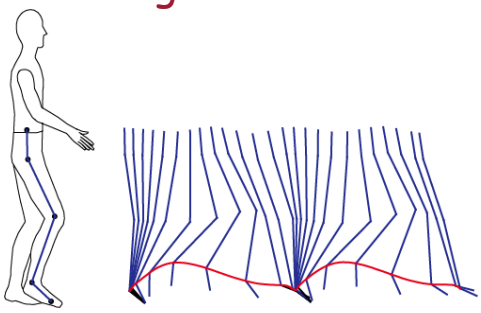
USC Division of Biokinesiology and Physical Therapy

IRB Study #: HS-19-00430

Attention: Research Volunteers Needed

Healthy individuals, Stroke survivors up to 6 months post-stroke ages 18-90



You are invited to participate in a study to understand how we control balance and walking. The study will take place at the University of Southern California Division of Biokinesiology and Physical Therapy

Participation involves having small sticky markers placed on your head, torso, arms and legs so a computer can detect your movements as you stand, walk on the floor, and walk on a treadmill. You will also complete questionnaires about your physical and emotional well-being.

The study visits require about 2 hours for healthy individuals, and about 4 hours for stroke survivors. Let us know if you have a time preference and we will be sure to enroll you at a time that works with your schedule.

You will be compensated for participation in this study
