

Oly-Comm Repeater Terms & Conditions:

Licensed GMRS operators may use the Oly-Comm repeaters for communications subject to our Terms and Conditions and Operating Protocols (published on the web site) as amended from time to time:

Licensed GMRS users are welcome to use “Maynard”, “Uptown” or “Buck” (future) repeaters for communications pursuant to Part 95.1731, et al.

Because “Maynard” and “Uptown” are designed for operation as an “overlapping” regional and local saturation system they operate on the same frequency, but have different control tones. Consequently, users must a. listen in carrier squelch mode (no receive tones on their receiver) so as to effectively monitor for ongoing traffic and b. identify which repeater they are using. “This is Xxx monitoring “Maynard” or “Uptown” followed by “your call sign here”. When no traffic is present users are free to initiate new radio communications on either system.

If Oly-Comm Net Control is activated for specified tasks, such as the Weekly Net, (unless opened for urgent or emergency traffic to protect life or property) all other traffic should stand-by until the frequency is cleared for routine traffic.

Oly-Comm does not charge for use of any repeaters, but voluntary donations to cover system costs and reserves-for-repairs are always welcome.

Questions regarding these terms and conditions are always encouraged, feel free to contact us at info@radioofhope.org
