# The Processes we use to Brand Clothing

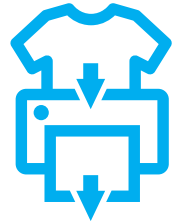

## Embroidery

Machine embroidery stitches a design onto fabric. The pattern is predetermined by uploading a design to the machinery's software and creating a Stitch Disk. This software file controls the needle head to form the design when applied to the garment or fabric,

## Vinyl Press

Heat transfer vinyl, or HTV for short, is a specialty vinyl polymer that can be used on certain fabrics and materials to create designs and promotional products. It comes in a roll or sheet form with an adhesive backing so it can be cut, weeded, and placed on a substrate for heat application

## DTG

Direct-to-garment printing is a process of printing on textiles using specialized aqueous ink jet technology. DTG printers typically have a platen designed to hold the garment in a fixed position, and the printer inks are jetted or sprayed onto the textile by the print head.
