

The Trees of St. Mark's

Although we were worried our five 104 year trees would be cut down rather than just trimmed, the city of Montesano came through for us. They told the PUD to only trim the trees and remove dead limbs. They have been extensively trimmed from the major bulges of growth that extended far up into the power lines, but at least they are still here. They probably won't need to be trimmed again for another 20 years.
