PROXIMA
THE SPATIAL BIOLOGY PLATFORM™

A Simple, Flexible Interface for Researchers to Truly Collaborate.

Proxima™ is a sophisticated data and image management system that implements powerful, streamlined tissue biomarker analysis workflows locally. It enables your lab to transition to fully cloud-based workflows when ready.
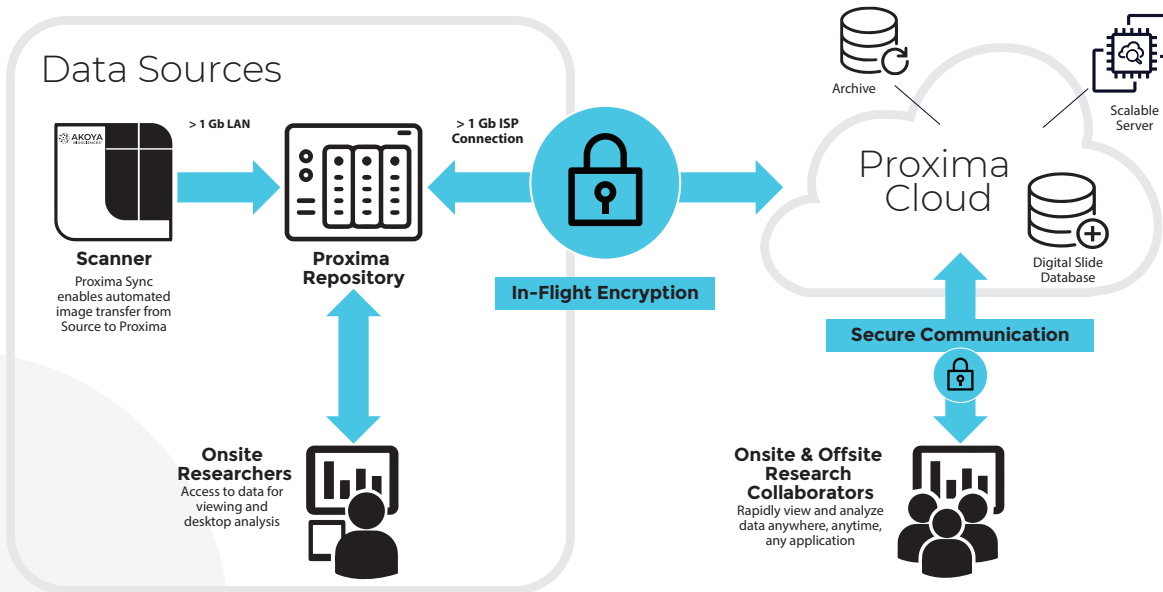

Unlimited, Secure Cloud Storage	Rapid Tissue Analysis	Cloud-Based Collaboration Tools	Archive and Restore

- Automated data synchronization from scanner to repository to cloud.
- Anywhere, anytime cloud data access

- Cloud data is mirrored locally for fast access with desktop analysis software
- Secure, study-based user authorization

- Web based whole slide viewer with on-demand spectral unmixing
- Archival space for completed studies

Proxima is a hybrid cloud system designed to make data access easy – anywhere, anytime – without changing your current workflows.
