

OPEN EXCELLENCE.

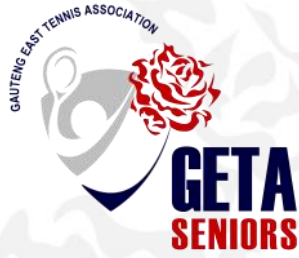

When you pop the top of a can of Wilson tennis balls, you can actually hear the sound of excellence. The official ball of the **US Open** for over 35 years, each ball is constructed with premium woven felt providing remarkably consistent bounce and feel during every hit. Excellence comes in many forms at the US Open, but only one form when it comes to balls: **Wilson**.

THE AMAZING PROPERTIES OF IONIZED WATER

There are 3 main properties that make ionized water different from any other water in the world; anti oxidation, micro clustering and alkalinity.

Alone, each of these has tremendous benefits, but when they come together, they create an incredible combination. Water, usually tap water, enters the water ionizer where it first passes through an internal filter, where impurities and chemicals like chlorine are removed.

The filtered water then passes through a series of electrically charged electrodes also known as "plates" where a positive and negative charge physically separates ions in the water into two streams; one is acidic, the "positive" water and other is alkaline, the "negative" water.

AVAILABLE FOR PRIVATE LABEL

We have a great client base who have branded our water for sale in company canteens, golf clubs, gyms, game lodges.

The full range is available with your custom branded label and color coded lid.

FINALLY, PERFORMANCE EYEWEAR YOU CAN LEAVE ON YOUR FACE

ANTI-FOG BACK HYDROPHOBIC FRONT

antiFOG

finally, performance eyewear you can leave on your face

PHOTOCHROMIC

When the sunlight changes the tint changes. The science behind it is complicated but the result is as simple as that.

ANTI-FOGBACK

The back of the lens resists fogging, even in the most demanding conditions. It is permanent and washable so you can wipe the lens without the risk of removing its anti-fog properties.

HYDROPHOBICFRONT

The front of the lens needs to overcome an entirely different set of challenges than the back of the lens so it only makes sense that the front is treated independently. Water runs off the Hydrophobic layer at first contact, leaving clear lines of sight that are free from large droplets and water marks.
